Top head’s warning to ‘snowflake’ generation

By Geoff Maguire

There are real risks and known dangers with the Internet, and the potential for harm is immense. The following guidelines are designed to help users protect themselves and others from the potential dangers of the Internet:

1. Use strong passwords and change them regularly.
2. Be cautious when sharing personal information online.
3. Avoid downloading files from unknown sources.
4. Be wary of phishing scams and other forms of online fraud.
5. Keep software and operating systems updated.
6. Be aware of the potential for cyberbullying.
7. Use social media platforms responsibly.
8. Be cautious when using public Wi-Fi networks.
9. Be mindful of the potential for online predators.
10. Use caution when engaging in online gaming.

Top Head of a School in the UK

The top head of a leading school in the UK has warned of the dangers posed by the so-called ‘snowflake’ generation. The head, who is a former Olympic athlete, said that young people are increasingly seeking protection from any form of criticism or challenge.

“We have to be careful not to stifle creativity and innovation,” the head said. “We need to teach young people the skills they need to succeed in the real world, not to protect them from every possible setback.”

The head’s comments come as the government prepares to introduce new measures to tackle online bullying and harassment. The measures, which are being discussed by the Cabinet Office, are due to be announced later this month.
